

Fast and
easy control
of your gas
gen-sets and
CHPs

| **Gas & CHP** Solutions

Reduce time to market

Our pre-programmed solution allows you to control the gas gen-set very quickly, saving you time to focus on developing your expertise and business.

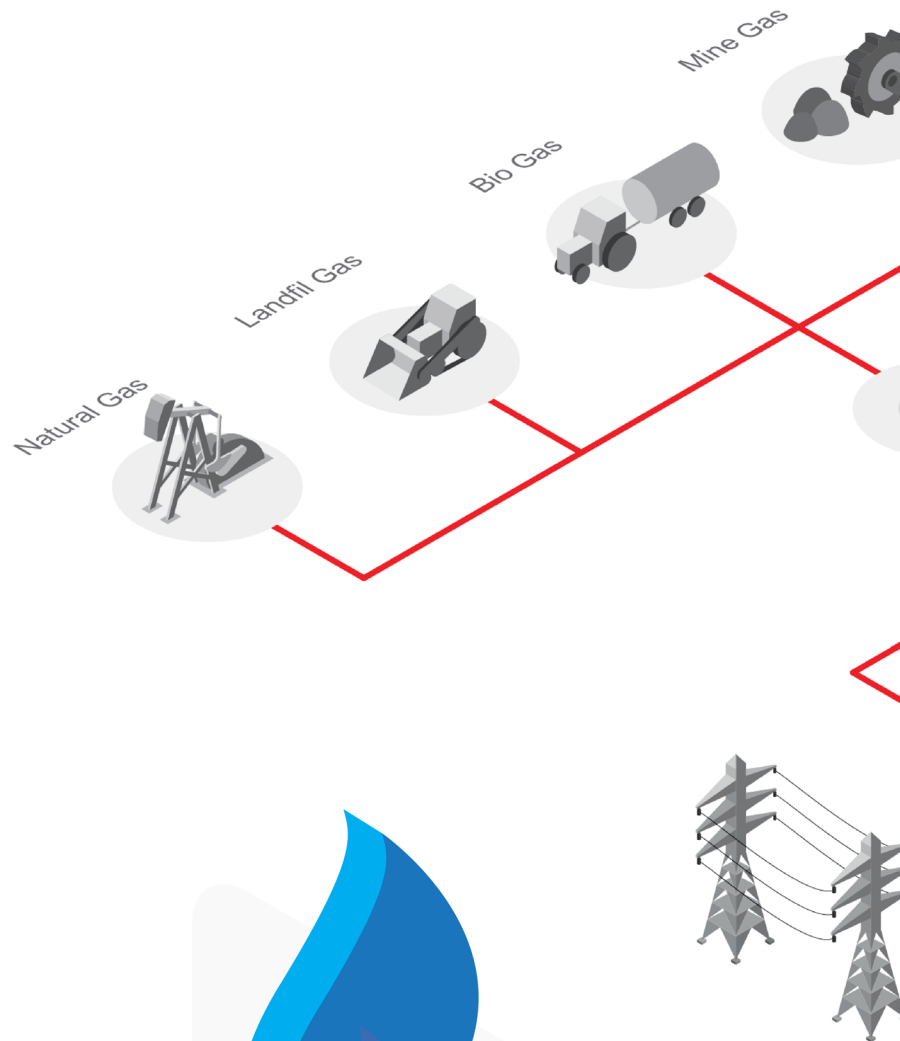

Realise any project, regardless of size or complexity

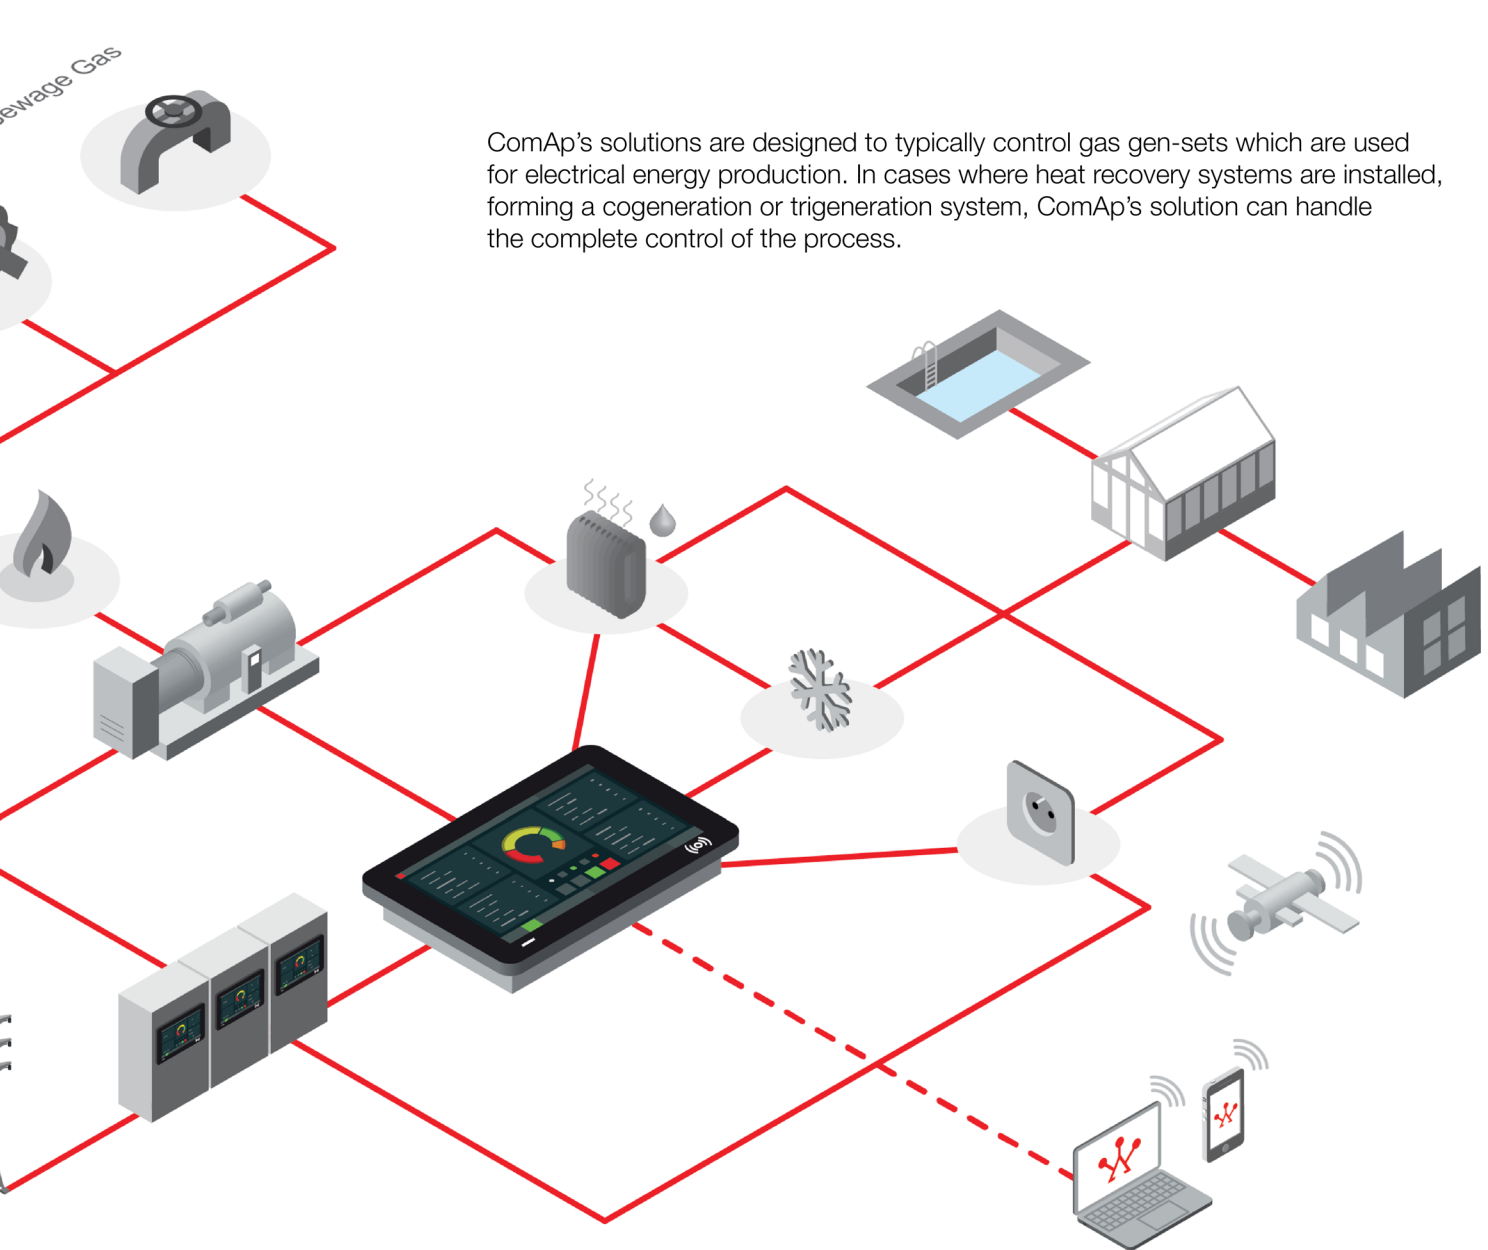

With our flexible solution and built-in configurable PLC interpreter you can adapt to any project need in a very short time, customise the system easily and implement almost any change and function on your own.

Maximise the solution uptime

Detailed diagnostics of the whole control process for early problem detection, as well as a notifying system with alarms and messages to keep your system up and your operations efficient.

Our system controls the essential parts of the gas engine (e.g. Air/Fuel ratio to secure safe and reliable operation and emissions compliance), ensures compliance to local standards norms and requirements (e.g. grid connection rules - Grid codes) and interface to other on-site products such as ignition and others. Detailed system diagnostics are available both locally and remotely to make sure your system is available and running smoothly.

Find the right CHP solution for you

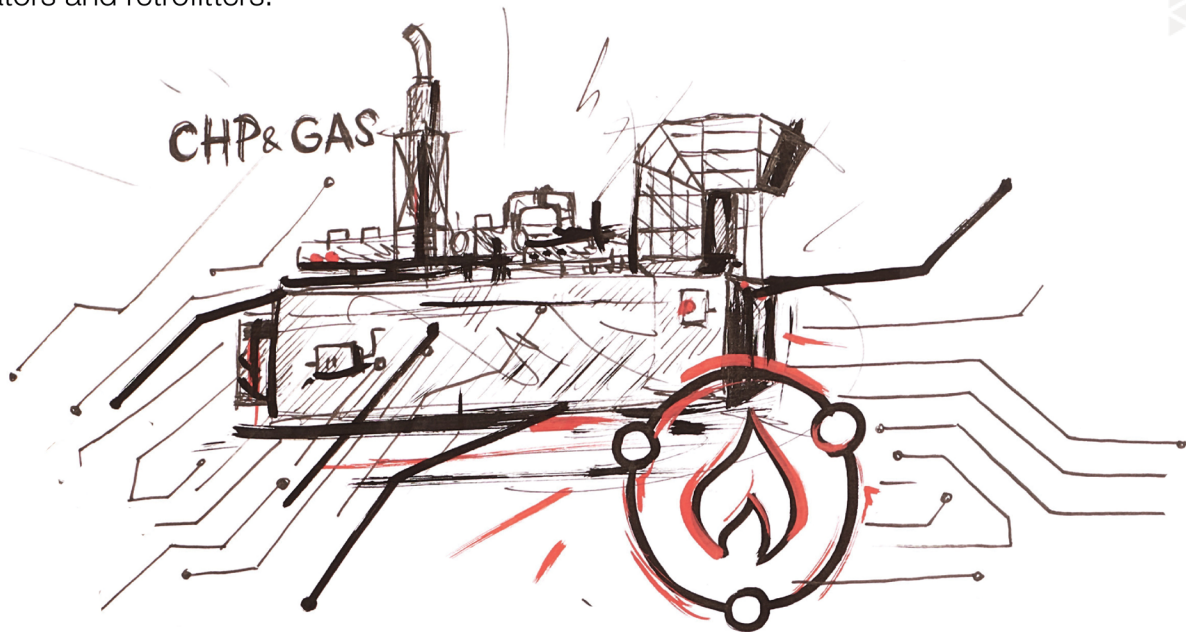

ComAp's solution for gas gen-sets and CHP are being used by various customer groups. The solution meets the variety of requirements typical for CHP packagers, the demanding legislation requirements typical for OEMs, and it also meets the flexibility requirements set by system integrators and retrofitters.

We offer tailored solutions for:

- > Cummins
- > Guascor
- > Jenbacher
- > MAN
- > MTU
- > MWM

Add any gas engine, with or without an ECU or engine control system.

Manage your fleet securely from anywhere in the world

Get a comprehensive overview of the status of your devices, their exact location and all important data with ComAp's WebSupervisor via your PC or mobile device.

Easy SCADA monitoring and management of your smart controllers

Simplify the monitoring and management of energy controllers and accessories for both simple and complex projects with ComAp's IntelliScada PC monitoring tool.

Our modern and user-friendly SCADA system is secure, reliable, easy to program and ready to start monitoring your site with just one-click.
